Summary — AI Product Manager — 0-to-1 Product Launches — Secured \$350K Funding — Rapid Prototyping

Skills

Core Product Competencies: Product Strategy & Roadmapping, User Research & UX (Interviews, Personas, Journey Maps), PRD & Spec Writing, Agile Project Management

AI Technical Specialization: LLM Integration Prompt Engineering (e.g., Anthropic, OpenAI APIs), AI Development Tools: Cursor AI, Lovable, Perplexity, Jasper, Technical Skills: API Integration, Basic Frontend Principles (HTML/CSS/JS) **Product**

Collaboration Stack: Design Prototyping: Figma, Whimsical, Miro, Project Management: Jira, Notion, Linear, Slack, Business Ops: Salesforce, Apollo, Vercel

Experience

Webbuddy — Building AI-first SaaS products

March 2024 – Present

Associate Product Manager

Project: Growstack.ai

- Secured \$350K in pre-seed funding by authoring the core product strategy, defining the MVP roadmap, and building the business case presented to investors.
- Led a cross-functional team of 20+ engineers and designers through the entire product lifecycle, from initial user research and wireframing to a successful on-time launch.
- Currently driving product development and defining the Go-To-Market strategy to achieve a \$1M seed funding target.

Project: Interview Copilot

- Delivered a functional MVP for a client in just 2 weeks, rapidly taking the project from initial concept to a deployable prototype and exceeding stakeholder expectations.
- Took full ownership of frontend development, using AI-assisted tools to build the entire user interface from scratch and single-handedly bring the product vision to life.
- Translated client requirements into detailed user stories and journey maps, creating a clear development blueprint that ensured perfect alignment with their business goals.

Project: Webbuddy Marketplace (Buy and sell websites)

- Conducted in-depth market research and then designed the end-to-end platform architecture to capitalize on this opportunity.
- Rapidly developed and deployed over 20 functional AI and SaaS prototypes in a 30-day sprint, validating product hypotheses and testing new feature concepts for the marketplace
- Applied hands-on frontend and API integration skills to accelerate prototype development and ensure seamless, high-fidelity collaboration with the engineering team.

Case Studies

Graduation Project: Reduce Ride Cancellation for OLA (NextLeap)

July 2023 – August 2023

- Achieved a top-fellow ranking (scoring 70%) by delivering a comprehensive, data-backed proposal to reduce ride cancellations.
- Synthesized findings from 30 user surveys and 5 in-depth interviews to uncover a key insight: cancellations were driven by perceived wait-time anxiety, not just actual delays.
- Followed a structured process: problem identification → hypothesis → ideation → wireframing → usability testing → success metrics → risk analysis

Product Teardown and Competitive Analysis

May 2023 – July 2023

- Analyzed 8 different products to break down and understand key features (e.g., onboarding, booking, search).
- Conducted in-depth UX studies, including user segmentation, pain point identification, and journey mapping.
- Proposed feature improvements with success metrics to measure impact.

Education

Madhav Institute of Technology and Science

December 2020 – July 2024

Bachelor of Technology in Electrical Engineering

Specialisation: Internet of Things (IoT)

Certifications

- Nextleap - Recognized as a Top Fellow in a competitive 225-person cohort.
- NCC - Awarded the 'C' Certificate with Distinction ('A' Grade).
